

DANE COUNTY BOARDROOM

The Dane County Boardroom System is a multi-mode RTS (request to speak) system including fifty-eight (58) microphone stations. Each microphone is mounted in a base station with a built-in speaker. A circular LED at the top of each microphone indicates when that unit is active. The chairperson using the touchscreen can control all microphones. Signals from the microphones are distributed to the speakers housed in the microphone bases as well as to various recording and broadcasting devices, and are also reproduced in the ceiling speakers. The system is programmed with five separate "user modes" for use by the City Zoning Natural Resources, City Plan Commission, Common Council, County Board, and Municipal Court.
